

DEMENTIA AWARE COMPETENCY EVALUATION

DACE helps both paid and unpaid carers learn how their responses are sensed by the person with dementia, which directly influences how the relationship and the quality of care provided. This method of assessment allows for feedback based on individual carers and their clients. Indicators on the DACE have been developed in accordance with best practices associated with positive outcomes of care:

- Documents positive trend in empathic person-centered care.
- Assesses care competency of those serving people with dementia.
- Carer behavior is tabulated to provide information regarding improvement needs.
- Provides instant data during direct care.
- Provides ongoing review for work performance evaluation.
